10-MAY-2002.

```
The invention relates to a novel ubiquitin conjugating enzyme (UBC)
homologue, RATL1d6 (regulated in activated T-lymphocytes 1d6) and its
corresponding nucleic acid. The invention also relates to methods for
treating, diagnosing, preventing and screening for disorders related
to the expression of RATL1d6. UBC is useful for screening for candidate
compounds capable of binding to and/or modulating its activity. UBC is
useful for treating an immune or neuronal disorder in a mammal. The
method is useful for treating a cancer or tumour. It is useful for
suppressing the immune response in a subject requiring the suppression.
It is also useful for treating lymphoproliferative disorder, cancer e.g.
adenocarcinoma, leukaemia, myeloma, sarcoma, etc, neurodegenerative
disorder, inflammatory disorders e.g. rheumatoid arthritis, asthma,
multiple sclerosis, psoriasis, etc, neuronal disorders e.g. Alzheimer's
disease, dementia, depression, epilepsy, etc, immune disorder or immune
related disorders such as acquired immuno deficiency syndrome (AIDS),
allery, anaemaia, atopic dermatitis, disbetes mellitus, myocardial
tubular acidosis, gonadal dysgenesis, dysplasia, cataract, etc. The
present sequence is human RATL1d6 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

cancer-associated nucleic acid molecules (N) and proteins (P), where cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon. Cancer antigens have cytostatic activity and cancer antigens. The colon. Cancer antigens have cytostatic activity and cancer antigens. The colon. Cancer antigens have cytostatic activity and cancer in appropriate production. N and P may be used in the prevention, chargesion. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing the nucleic acids into a host cell and culturing the cell of the patients own production of P. Additionally, N may be used to produce the colon cancer associated Ps, by inserting the nucleic acids into a host cell and culturing the cell of the cancers. Ashaying the cell and treatment of colorectal carcinomas and cancers. Ashaying to Ashaying represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  59 FRIASACLDELSCEFLLAGAGGAGAGAAPGPHLPPRGSVPGDPVRIHCNITESYPAVPPI 118

The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; antianaemic; vulnerary; antiinflammatory; immunomodulator;

Polypeptides (I) encoded by (A) are used. (a) for identifying agents for treatment of prostatic cancer and (b) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTS (expressed sequence tags) before these are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTS. ANY48304-Y48456 represent peptides encoded by the expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid expressed at high level in normal prostatic tissue and encoded polypeptides, used to treat cancer and screen for therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expressed sequence tag; EST; prostate; tumor; treatment; gene therapy; cancer; tissue specificity; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Rosenthal A;

The invention relates to a novel ubiquitin conjugating enzyme (UBC) homologue, RATLIG6 (regulated in activated T-lymphocytes 1d6) and its corresponding nucleic acid. The invention also relates to methods for treating, diagnosing, preventing and screening for disorders related to the expression of RATLIG6. UBC is useful for screening for candidate compounds capable of binding to and/or modulating its activity. UBC is useful for treating an immune or neuronal disorder in amammal. The method is useful for treating a cancer or tumour. It is useful for suppressing the immune response in a subject requiring the suppression. It is also useful for treating lymphoproliferative disorder, cancer e.g. adenocarcinoma, leukaemia, myeloma, sarcoma, etc., neurodegenerative disorder, inflammatory disorders e.g. rheumatcid arthritis, asthma, multiple sclerosis, psoriasis, etc., neuronal disorders e.g. Alzheimer's disease, dementia, depression, epilepsy, etc. immune disorder or immune companies and acquired immuno deficiency syndrome (AIDS), and acquired immuno deficiency and acquired immuno deficiency and acquired immuno deficiency and acquired immuno deficiency and acquired a

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX control of the protein of the protective; shelpertities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; cathibsorian; cordana; thrombolytic; immunosuppressant; municostimulant; cardana; thrombolytic; coaquiant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antidabetic; hypotensive; dermatological; immunosuppressive; antidabetic; hypotensive; dermatological; immunosuppressive; antidatamenty; and antidanaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating to pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy. Conclete acids can be used to express ORFX proteins in gene therapy. Conclete acids can be used to express ORFX proteins in gene therapy. Conclete acids and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, concliterative disorders, cardiovascular disease, diabetes mellitus, cholesterol ester storage, systemic lupus confirmed immunodeficiency (SCID), AIDS, viral, confirming the infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coaquiation; to inhibit thrombosis; and as a contraceptive. <u>8</u> antianaemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antilnflammatory disease; coaqulation; PCLRRELKLLESIFHRGHERFRIASACLDELSCEFLLAGAGGAGAGAAPGPHLPPRGSVP Gaps × Novel nucleic acids and peptides derived from open reading frame useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease antirheumatic; antithyroid; .; ' 56.8%; Score 1266; DB 21; Length 263; 94.3%; Pred. AAY73325-Y73389 are human transcriptional regulator molecule (HTRM)

protein sequences. The HTRM protein and nucleotide sequences are useful

for preventing or treating disorders associated with decreased expression

or activity of HTRM which include cell proliferative disorders such as

carteriosclerosis and cirrhosis; cancers including adenocarcinoma and

leukaemia; immune disorders such as AIDS, Addison's disease, diabetes

carteriosciated arthritis, multiple sclerosis, systemic lupus

cerythematosus, and myasthenia gravis; infections and trauma. Antagonists

of the HTRM polypeptides are useful for treating or preventing disorders

cof the HTRM polypeptides are useful for treating or preventing disorders

cof the HTRM polypeptides are useful for treating or preventing concernation in the properties of compounds in drug screening techniques.

Cof screening libraries of compounds in drug screening techniques.

Cof mRNA and regulating gene function by modulating the activity of frammatorial compounds and the activity of fractions and the activity of fraction by modulating the activity of fractions and specifically bind HTRM and polypucleds encoding HTRM or agonists can also be used to prevent concernation and the HTRM and pregulating the decreased HTRM expression. differences in gene sequences among normal, carrier and affected individuals. Using diagnostic assays, cancer can be detected prior to the appearance of clinical symptoms and thereby progression of cancer be prevented by aggressive treatment or preventive measures.

                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01876-ABL30511), expressed DNA

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         337 PVLSGGYVLGGGAICMELLTKQGWSSAYSIESVIMQISATLVKGKARVQFGANKS---Q 392
                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       217 SEDDGIGKENLAILEKIKKNQRQDYLNGAVSGSVQATDRLMKELRDIYRSQSFKGGNYAV

The invention also relates to methods for treating, diagnosing, preventing and screening for disorders related to the expression of RATLide. UBC is useful for screening for candidate compounds capable of binding to and/or modulating its activity. UBC is useful for treating an immune or neuronal disorder in a mammal. The method is useful for treating a cancer or tumour. It is useful for screening for neuronal disorder in a suppression. It is also useful for treating lymphoproliferative disorder. Cancer e.g. adenocarcinoma, leukaemia, myeloma, sarcoma, etc, neurodegenerative disorder, inflammatory disorders e.g. rheumatoid arthritis, asthma, multiple sclerosis, psoriasis, etc, neuronal disorders e.g. Alzheimer's disease, dementia, depression, etc, immune disorder or immune related disorders such as acquired immuno deficiency syndrome (AIDS), allergy, anaemia, atopic dermatitis, diabetes mellitus, myccardial infarction, etc, developmental disorders e.g. Cushing's syndrome, renal the present sequence is human RATLid6 UBC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |: | :|||: | |||||

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain readrion (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving act of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in classible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of the Invention.

CR diagnostic amino acid sequences of the Invention of well sequences of the Invention.

CR diagnostic amino acid sequences of the Invention of appear in the printed activity and the specification, but was obtained in electronic format directly from Wipo at the Invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            249

polymetrase chain reaction (FKS) primare (1) and probes, polymetrase chain reaction (FKS) primare, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The control of (II) and in recombinant production of (II). The control activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and canding actic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           110 ESYPAVPPIWSVESDDPNLAAVLERLVDIKKGNTLLLOHLKRIISDLCKLYNLPOHPDVE

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cappositios, for genefic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human confidence of the print of any properties of the print of manners in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diphosphate + protein N-ubiquityllysine.
PATHWAY: Ubiquitin conjugation; second step.
MISCELLANEOUS: A cysteine residue is required for ubiquitin-thiolester formation (By similarity).
SIMILARITY: Belongs to the ubiquitin-conjugating enzyme family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matuschewski K., Hauser H.P., Treier M., Jentsch S.;

In late-pachytene-diplotene, the bulk of protein dissociates from the chromosome arms probably because of phosphorylation by PLK; except at centromeres, where cohesin complexes remain. It however remains chromatin associated at the centromeres up to metaphase I. buring anaphase I, it probably dissociates from centromeres, allowing chromosomes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     52 SSKTTAKLSTSAKRIQKELAEITLDPP---PNCSAGPKGDNIYEWRSTIL--GPPGSVY-

protein synthesis. Protects formylmethionyl-tRNA from spontaneous hydrolysis and promotes its binding to the 30s ribosomal subunits. Also involved in the hydrolysis of GTP during the formation of the 70s ribosomal complex (By similarity). SUBCELDULAR LOCATION: CYtoplasmic. SIMILARITY: BELONGS TO THE IF-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4 POPOGOO-OPGPGO-----QLGGQGAAPGAG--GGPGGGPGPGPCLRRELKLLESIF

-!- FUNCTION: CATALYZES THE COVALENT ATTACHMENT OF UBIQUIIN TO OTHER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -i- CATALITIC ACTIVITY: ATP + ubiquitin + protein lysine - AMP + diphosphate + protein N-ubiquityllysine.
-i- PATHWAY: Ubiquitin conjugation; second step.
-i- MISCELLANEOUS: A cysteine residue is required for ubiquitin-thiolester formation (By similarity).
-i- SIMILARITY: Belongs to the ubiquitin-conjugating enzyme family.
SIRONGEST, TO YEAST UBC1.
-i- SIMILARITY: Contains 1 UBA domain.
                                                                                                                                                                                                                                                                                                         Drosophila melanogaster (Fruit fly).

"Crystal structure of the cyclin-specific ubiquitin-conjugating enzyme from clam, E2-C, at 2. O. A resolution.";

Biochemistry 38:6471-6478(1999).

-!- FUNCTION: CATALYZES THE COVALENT ATTACHMENT OF UBIQUITIN TO OTHER PROMOTING COMPLEX (APC) AND IS ESSENTIAL FOR THE TRANSITION FROM METAPHASE TO ANAPHASE IN MITOSIS. INVOLVED IN BOTH, DECRADATION OF PROTEINS RESPONSIBLE FOR MAINTAINING SISTER CHROMATID COHESION AT THE ENERT OF ANAPHASE AND OF MITOTIC CYCLINS A AND B AT THE EXIT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          methylated histones. Probably trecruiting HP1 proteins to methylated histones. Probably targeted to histone H3 by different bna-binding proteins like E2F6, MGA, MAX and/or DP1. Also methylates histone H1 (By similarity).

CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine = sudenosyl-L-monecysteine + histone N6()-methyl-L-lysine.

SUBUNIT: Part of the E2F6.com-l complex in G0 phase composed of E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -1- FUNCTION: Histone methyltransferase. Preferentially methylates Lys-9 of histone H3 and Lys-27 of histone H3 (in vitro). H3 Lys-9 methylation represents a specific tag for epigenetic

TISSUE SPECIFICITY: Expressed in all tissues examined, with high levels in fetal liver, thymus, lymph node, spleen and peripheral blood leukocytes and lower level in bone marrow.
SIMILARITY: BELONGS TO THE HISTONE-LYSINE METHYLITRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-2126082; PubMed-11316813;
